

Fabrication Engineer

The Moray East Project is looking to engage an experienced Fabrication Engineer, on a contract basis, to support the work of the Project Substructures Package. The Substructures Team is responsible for the engineering, construction and installation of the WTG substructures and piles for the project. Within this scope is the design, construct, installation and commissioning of the WTG substructures and piles.

As the project progresses to the construction phases there is a requirement for Moray East to have a site presence to interface with contractors and manage the daily running of the construction. The site presence will support the Package Manager and represent the project at the contractor fabrication yards.

Main Accountabilities:

The successful candidate will support the Package lead and will possess a clear understanding of and experience in the following:

- Be the general client interface;
- Represent the project team at the WTG substructure fabrication sites;
- Track fabrication progress and undertake inspections as and when required;
- Attend progress meetings on a regular basis as required;
- Manage the delivery of the works, i.e. change requests, technical queries, nonconformance reports etc.
- Ensure the correct project interfacing is being undertaken and perform the coordination required to achieve a successful delivery;
- Manage the HSE aspects of the build on behalf of Moray East;
- Manage the financial aspects of the build on behalf of Moray East, review variations and approve payments etc.
- Review of applicable contractor fabrication documentation, i.e. Specifications, Procedures, Qualifications, Drawings, Reports etc. Where deemed appropriate for delivery of the works.
- Weekly reporting on delivery of the works for all fabrication contractors.

Required Professional/Academic Experience:

- Previous construction experience within the offshore industry.
- Minimum of 5 years' experience in a comparable role
- A proven engineering/fabrication/welding background
- Attention to accuracy and detail is essential
- HNC (or equivalent) or higher in Fabrication and Welding or related discipline is desirable.

Required Knowledge:

Knowledge of structural design processes and offshore installation is required.

- Working knowledge of construction standards, codes of practice and regulations/legislation relating to electrical and instrumentation work
- Knowledge of safety legislation and regulations
- Proficient knowledge of Office suite including Excel, Powerpoint and Word
- A good understanding and interpretation of engineering and fabrication drawings

Other Requirements:

- Full driving licence
- Ability to relocate
- Ability to travel at short notice and for extended periods

To apply or for more information, please email your CV and covering letter, outlining your motivations and relevant experience to date to: recruitment@morayeast.com
